

Catfish Eco 6

Marina Support Boat

Catfish Eco 6

General

L.O.A: 5.40 Metres
Beam: 2.60 Metres
Draft: 0.20 Metres
Construction: Aluminium
Top Speed: 24 Knots
Bollard Pull: 180Kg

Description

The Catfish Eco 6 is a monohull craft designed for use in very shallow water whilst creating very minimal wake and engine noise. Able to operate for extended periods of time, her hull form gives her excellent stability, high manoeuvrability and a shallow draft. She has built in buoyancy compartments and a raised wet deck to the stern.

The boat's deep gunwales, mean a low centre of gravity, which makes for a very stable craft in all conditions.

Welded aluminium construction throughout for minimal maintenance, maximum working life and continual operation. Marine grade 5083 (N8) Loyds approved aluminium is used on all plating in the construction.

The vessel is powered by a single 150hp 4 cylinder marine turbo-intercooled diesel engine through a heavy duty jet drive unit that offers low maintenance, along with durability and reliability.

A comfortable, non slip deck is achieved with the use of an epoxy set layer of EPDM granules available in a range of colours.

Main Features

- Buoyancy Tanks
- Shallow draft
- Excellent stability
- No maintenance
- Non marking Fendering
